

Overview

Murray Load Centers

Murray Load Centers by Siemens offer a unique, high quality outboard neutral design.

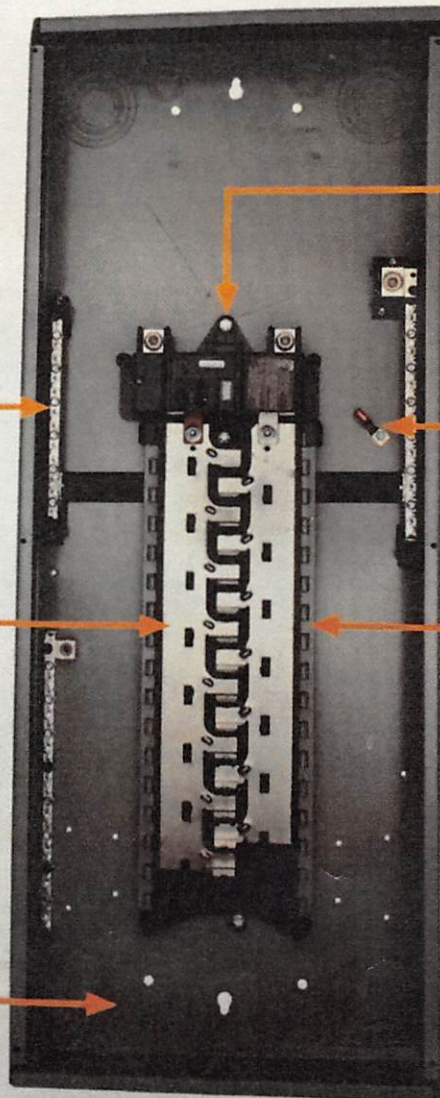

The following offering is available in the Murray load center product line:

- 12-60 Circuit/Spaces
- Indoor and outdoor enclosures
- 100-225 Amp
- Main lug and main breaker

Factory installed outboard neutral and ground bars allow for all connections to be located away from the breaker connections.

A rigid, sturdy basepan with metal hook rails provides the most rugged breaker connection in the industry.

All devices are invertible for bottom feed applications.

Mounting tabs on the trim hold the load center in place and free up both hands to drive in trim screws.

All devices are convertible from main lug to main breaker or vice versa.

With the use of the included bonding strap, ground bars and neutral bars can be bonded for service entrance applications.

"Swiss Cheese" style neutral bars provide multiple 1/0 connections.

Murray Load Centers now accept both Murray and Siemens® breakers!
